Endpoint Security

- Endpoint security is a client/server information security (IS) methodology for protecting a corporate network through focusing on network devices (endpoints) by monitoring their status, activities, software, authorization and authentication.
- Security software is installed on any endpoint device, as well as network servers. Such software may include antivirus, antispysware, firewall and a host intrusion prevention system (HIPS).

Endpoint Security For Business – Three Types

➤ SELECT

➤ ADVANCED

➤ TOTAL

Endpoint Security For Business - SELECT

- ▶ HuMachine™-based protection for a wide range of platforms
- ▶ Protects against the latest threats, including cryptominers
- ▶ Hardens endpoints – to reduce your exposure to cyberattacks
- ▶ Helps boost productivity – via cloud-enabled usage controls
- ▶ Protects servers & endpoints without damaging performance
- ▶ Secures diverse environments – PC, Mac, Linux, iOS & Android
- ▶ Simplifies security management – with unified console

Endpoint Security For Business - **ADVANCED**

- ▶ Includes all of the functionality delivered by Kaspersky Endpoint Security for Business Select, plus additional technologies that do even more to protect your business
- ▶ Delivers adaptive protection against known & unknown threats
- ▶ Reduces your exposure to attacks – by hardening endpoints
- ▶ Helps prevent loss or theft of confidential business data
- ▶ Secures vulnerabilities – to reduce attack entry points
- ▶ Saves time – by automating OS & software deployment tasks
- ▶ Streamlines security management – with unified web console

Endpoint Security For Business - **TOTAL**

- ▶ includes every function provided by Kaspersky Endpoint Security for Business Advanced, plus security for mail servers and Web gateways.
- ▶ Simplifies management of security – via one unified console
- ▶ Provides Next Gen protection against the latest cyberthreats
- ▶ Helps businesses tailor security for new & legacy systems
- ▶ Reduces exposure to attack... by hardening corporate endpoints
- ▶ Encrypts data – to prevent loss of confidential information
- ▶ Eliminates vulnerabilities – to remove attack entry points
- ▶ Does more to support your regulatory compliance initiatives
- ▶ Protects email and web traffic

Security Management Console

- ▶ Kaspersky Endpoint Security Cloud is a software solution developed specially for small and medium-sized businesses. It lets you manage security for multiple endpoints, mobile devices and file servers remotely, from anywhere by means of cloud-based console
- ▶ Kaspersky Endpoint Security Cloud is hosted and maintained by Kaspersky Lab
- ▶ Using Kaspersky Endpoint Security Cloud, you can do the following:
 - ▶ Install and update Kaspersky Lab applications in a centralized way on computers and mobile devices of your company employees that have been connected to Kaspersky Endpoint Security Cloud
 - ▶ Manage device settings and protection using security profiles
